Domains. Concept: Concepts are defined and used to support strongly coded data throughout the system Encounter: Contains the meta-data regarding health care providers interventions with a patient. Form: Essentially, the user interface description for the various components. Observation: This is where the actual health care information is stored. There are many observations per Encounter.

Data Model - Documentation - OpenMRS Wiki

It turns out that they are considering handing off this code to the OpenEMR community so that will be a decent effort in terms of testing, documentation, and maybe thinking of ways we can move the code into the PHP codebase as discussed in point 3 (however, I still think a Docker will be needed because FHIR validation/parsing is much better in ...

OpenEMR and FHIR - OpenEMR Development - OpenEMR Community

Perhaps a way to document these would be to standardize all the function headers and run them through a standard library documentation script. Then would have really nice documentation for developers (this would then likely lead to re-organization of libraries etc.). -brady OpenEMR

OpenEMR / Discussion / Developers: OpenEMR and Zend

Definition. Health Level 7 (HL7) is an international standard for the transmission of medical data and the name of the organization responsible for maintaining and growing this standard (among other things).. See the HL7 definition on Wikipedia; HL7 in OpenMRS Available Message Parsers

HL7 - Documentation - OpenMRS Wiki

If you need server software for the medical practice you administer, look no further than the open source OpenEMR.
