capacity of piles. The piles installed can be a single pile or group piles. Hence the load calculation for a single pile and group pile will be different. This is done for given load condition or for the size of foundation.

Pile Load Capacity Calculation - Single Pile and Group Pile

Acces PDF Single Piles And Pile Groups Under Lateral

The complexities of designing piles for lateral loads are manifold as there are many forces that are critical to the design of big structures such as bridges, offshore and waterfront structures and retaining walls. The loads on structures should be supported either horizontally or laterally or in both directions and most structures have in common that

The deflection of a pile group under a lateral load is typically 2 to 3 times larger than the deflection of a single pile loaded to the same intensity. Many researchers, starting early on (e.g. Holloway et al. (1981) and Brown et al. (1988)) reported that piles in trailing rows of pile groups have significantly

The key for calculating the settlement of pile group by a single pile is the analysis of the interactions among piles.

Moreover, the consideration of the mutual reinforcing effects plays a very important role in analyzing the interactions between piles. Liang et al. [12], Yan and Zhang [13
