### Solid Acids and Bases - 1st Edition

The characterized solid acids and bases have been applied as catalysts for diversified reactions, many good correlations being obtained between the acid-base properties and the catalytic activities or selectivities. Recently, acid-base bifunctional catalysis on solid surfaces is becoming a more and more important and intriguing field of study.

We prefer using pure, solid acids and bases to make standard solutions, why? During the standardization of NaOH, Shane didn't notice that there was an air bubble in the tip of the buret when they started their rough titration. The bubble went away during the rough titration and Shane continued with two fine titrations.

The reaction of an acid with a base is called a neutralization reaction. The products of this reaction are a salt and water. acid + base → salt + water. In this traditional representation an acid-base neutralization reaction is formulated as a double-replacement reaction.

### Acid-base reaction - Wikipedia

Acids may be identified as either strong or weak based on how completely they dissociate into their ions in water. A strong acid, such as hydrochloric acid, completely dissociates into its ions in water. A weak acid only partly dissociates into its ions, so the solution contains water, ions, and the acid (e.g., acetic acid).
