What Is The Requirement Of

A requirement is a specification of a need or want. Sets of requirements are used to capture the information needed to design, build and test a process, service, product or system. Each individual requirement is typically structured to be distinct, relevant, testable, traceable and unitary, meaning that it addresses one thing and only one thing. Collectively, sets of requirements are typically designed to be consistent and cohesive.

What is a Requirement? - Simplifiable

In product development and process optimization, a requirement is a singular documented physical or functional need that a particular design, product or process aims to satisfy. It is commonly used in a formal sense in engineering design, including for example in systems engineering, software engineering, or enterprise engineering. It is a broad concept that could speak to any necessary function, attribute, capability, characteristic, or quality of a system for it to have value and utility to a
